## Full Stack AI Engineer

### WORK EXPERIENCE

#### Accenture

##### Senior Software Development Engineer & Technical Lead

08/2023 - 12/2024

- Led cross-functional engineering teams in delivering mission-critical applications, conducting 50+ code reviews, mentoring junior developers on AI/ML integration patterns, and driving technical excellence across the full stack.
- Architected RAG pipelines with LangChain/LangGraph featuring step-back prompting, multi-query generation, and LLM-based evaluation; reduced data retrieval time 40% for 50-100 users in production
- Spearheaded Agile Scrum delivery as technical lead, facilitating sprint planning, backlog grooming, and stakeholder communication while translating complex technical concepts into actionable business solutions.
- Led production incident triage and resolution, coordinating cross-functional teams to minimize downtime, document root cause analyses, and implement preventive measures for continuous improvement.

##### Software Development Engineer

12/2020 - 08/2023

- Architected and deployed scalable full-stack applications using Next.js (SSR/SSG), Node.js microservices, and Docker containerization, supporting 2,000+ concurrent users with 99.9% uptime.
- Architected event-driven architecture using Kafka for real-time data streaming and BullMQ for async job processing, handling 5K+ messages/hour and reducing system latency by 30% in data-intensive modules.
- Designed and implemented API contracts, caching solutions, and database sharding/indexing strategies in MongoDB, achieving 50% reduction in API response time and significantly improving application performance.

##### Associate Software Engineer

09/2018 - 12/2020

- Developed frontend features using React and Next.js, integrating with Node.js/Express.js RESTful APIs for data-intensive applications.
- Contributed to production support activities, participated in bug fixes and incident resolution to maintain system stability.
- Collaborated with senior engineers to learn system architecture, coding best practices, and full-stack development principles.

### EDUCATION

#### Master of Science in Computer Info Systems - AI Spec

Indiana Wesleyan University • Indiana, United States

01/2025 - 08/2026

#### Bachelor of Science in Computer Science

Osmania University • India

03/2014 - 08/2018

### PROJECTS

#### TheWhiskCorner - Full-Stack AI-Powered Web Application

10/2024 - Present

- Engineered a responsive and dynamic front-end using Next.js, delivering a seamless user experience for browsing and booking custom cakes on TheWhiskCorner platform.
- Developed a Generative AI feature utilizing a Retrieval-Augmented Generation (RAG) pipeline, integrating LangChain with a vector store to significantly enhance personalized customer support.
- Optimized database performance by implementing MongoDB, achieving a 30% reduction in average query execution time through strategic indexing and schema design.
- Secured the platform by integrating robust user authentication and authorization features using JSON Web Tokens (JWT) and seamlessly integrated third-party payment gateway solutions for secure transactions.

#### Agentic React Code Generator (PaaS Architecture)

09/2024 - 01/2025

- Developed a Cursor-style IDE agent utilizing LangChain and LangGraph to create and iteratively optimize React applications through a sophisticated, multi-step agentic workflow. Incorporating a human-in-the-loop (HIL) system for effective management of complex edge cases.
- Architected a dual-database knowledge system combining Neo4j (Graph Database) for modeling complex relationships in the knowledge graph and Qdrant (Vector DB) for efficient semantic memory and node indexing.
- Optimized system throughput and reliability by integrating message queue, effectively managing high request traffic and facilitating asynchronous processing for long-running agent tasks.
- Integrated a persistent memory layer using MongoDB to enable session checkpointing, allowing users to resume complex agentic development and maintain context across multiple sessions.

## SKILLS

---

- **AI Technologies:** Agentic Workflows, GenAI, LangChain, LangGraph, NLP, RAG Pipelines, Vector Databases
- **Frontend:** JavaScript, Next.js, Python, React, Redux, TypeScript, UI/UX
- **Backend:** BullMQ, Express.js, Kafka, Langchain, Langgraph, Node.js, PaaS (Docker), REST APIs
- **Data & Databases:** MongoDB, MySQL, Neo4j (Graph DB), Qdrant (Vector DB), Redis
- **Cloud & Infrastructure:** CI/CD, Database Indexing/Sharding, Docker, Git, Microservices Architecture
